## AUTO TEMPERATURE SCANNING & FEVER DETECTION WITH MOBILE APP

With the recent outbreak contagious diseases and virus epidemic , installing thermal screening and detection camera system is the first step to keep your valuable employees safe. The solution pre-screen visitors and employees temperature accurately before entering the premises.

Our intelligent thermographic camera takes full advantage of 50mK dual sensor from Thermal Radiometry - Thermal and Optical Lens, to detect and identify the temperature within the range of -40 to +550°c. Any heat emitted by individuals is accurately screen by the thermal cameras. In case temperature above 37°c is captured, notifications will be sent to mobile app while at the same time alarm will also notify security guard with the detail of emperature and suspected visitors visual in colour.

KEY FEATURES

- ☑ Temperature reading range of -40 to +550°C

- ☑ Dual sensor : Thermal and Optical Lens
  (Thermal for detect and Optical lens to identify)

- ☑ The thermal sensor is capable of detection in complete darkness, through smoke/smog, or a thin plastic film

- ☑ No glare from strong sources of light (such as headlights, hand-held lamps

- ☑ Detection of hotter than average body parts

- ☑ Come with speaker with alert warning sound once detect over temperature
